        <h2 class="text">What is Coronavirus? (Covid-19)</h2>
            <div class="text">
            Coronaviruses are a type of virus, some of which can cause disease. </br>
            Covid-19, also known as SARS-CoV-2, was recently discovered and is</br>
            responsible for the current worldwide pandemic. It emerged from </br>
            China in December of 2019.</br>
            </br>
            Symptoms include:
            <ul>
                <li>cough</li>
                <li>fever or chills</li>
```

```html
73                    <li>shortness of breath or difficulty breathing</li>
74                    <li><a
                      href="https://www.cdc.gov/coronavirus/2019-ncov/symptoms-testing/symptoms
                      .html">full list of symptoms</a></li>
75                <ul>
76                </div>
77                </br>
78                <hr>
79          <h2 class="text">How is Social Media Spreading Misinformation?</h2>
80          <div class="right">
81                    <img src="social-media.jpg">
82          </div>
83              <div class="text">
84                  An excerpt from the Harvard Gazette:
85                      </br>
86                      </br>
87                      <div class="tab">
88                      - "The sudden onset of a new, highly contagious coronavirus has
                      unleashed what </br>
89                      U.N. Secretary-General António Guterres last week called a
                      "pandemic of misinformation," </br>
90                      a phenomenon that has not gone unnoticed as nearly two-thirds of
                      Americans</br>
91                      said they have seen news and information about the disease that
                      seemed </br>
92                      completely made up, according to a recent Pew Research Center study."
93                      </div>
94                  </br>
95                  </br>
96                  Social media has been plagued with disinformation campaigns
                  deliberately spreading false information,</br>
97                  one of the most notorious being the film "Plandemic", which claims that
                  the pandemic is a ruse to force</br>
98                  people to vaccinate en masse. Most social media platforms have already
                  banned the film.</br>
99                  There was also a video purporting to be of the Chinese government
                  supposedly executing residents</br>
100                 in Wuhan infected with Covid.
101                 </br>
102                 </br>
103                 There are also those making honest, genuine mistakes, such as advising
                  others to eat garlic</br>
104                 or gargle with salt water to help protect against Covid-19.
105                 </br>
106                 </br>
107                 The popularity of social media doesn't help either, as posts containing
                  misinformation can gather</br>
108                 hundreds upon thousands of views. There is also the repost/foward
                  feature that allows people</br>
109                 to pass said misinformation onto their friends and so on.
110                 </br>
111                 And with such little information availible, people are becoming more
                  desperate, and as a</br>
112                 result willing to believe such far-fetched theories and ideas.
